

oerlemans plastics  
horticulture

#### APPLICATIONS

- ♦ Chrysanthemums
- ♦ potted plants
- ♦ Other crops where blackout is necessary

## BLACKOUT FILM

up to almost 100%  
light-tight

suitable for screen  
applications

fully customized  
possible

The blackout film is ideal to use as a permanent or temporary screen. Because the foil is 100% opaque coloured in combination with the right raw materials, it is almost 100% light-tight. This prevents the light emission to the outside or inward. This allows you to achieve the ideal shade for your cultivation. There are various sizes in stock of the black blackout film. In black-white and white-black-white we have standard rolls in stock for production.
